

Al Khabra Early Mining & Construction

In July 2015 Ma'aden Wa'ad Al Shamal Phosphate Company (MWSPC) awarded the Early Mining & Construction Services Contract at Al Khabra, situated adjacent to the northern border of Saudi Arabia, to Saudi Comedat Company Limited. The contract consists of selected mining infrastructure and preparation works for the phosphate mine, which forms part of the integrated Ma'aden Wa'ad Al Shamal Phosphate complex. The mining and construction services contract is expected to be completed by the end of the first quarter of 2016.

Training

Saudi Comedat is committed to continual learning for all the employees. We place special emphasis on the training and development of our Saudi employees. We believe that resources spent on training result in satisfied employees who will behave in a safe and responsible manner for the company.

To this end, Saudi Comedat has established an onsite training facility and full time equipment trainers as part of our ongoing commitment to "providing world class service" to our clients.

SAUDI COMEDAT COMPANY LIMITED

Introduction

Saudi Comedat was founded in 2007 and have successfully introduced large scale mining to Saudi Arabia at the Al Jalamid project in Northern Saudi Arabia.

We are Saudi Arabia's only large scale full service mining company that offers solutions to your mining and quarrying needs.

Our commitment to continuous improvement along with world class standards of excellence in Health, Safety, Environment and Social responsibility make us well suited to be the Mine Contractor of choice in the Kingdom.

Vision

It is our vision to aim to be the leading and most successful mining company in the region, focused on the needs of our clients and committed to provide the highest standards of Safety, Social responsibility, Environmental care, Quality and Superior Service throughout the region.

Aims & Objectives

We aim to offer world class quality and technically sound service partner to Saudi Arabian Mining industry. We continually strive to provide expertise and technical finesse that will help Saudi Arabia develop and sustain its mining industry.

Strategic Objective

Saudi Comedat strives to offer its best technical expertise to help Saudi Arabia realize its stated goal to develop mineral based industry as the third pillar of the economy. Saudi Comedat will continue to develop and train local Saudi population to enable them to play active role in the development and continued prosperity of the country.

OUR BUSINESS

Management & Operations

Saudi Comedat has established itself as one of the leading contractors for Open Pit Mining in Saudi Arabia. We offer complete mining services including Minedesign and planning, Mine operations and maintenance, construction of the mine infrastructure and environmental mitigation measures in remote and challenging locations. In 2007 the company was awarded the contract to build the mining infrastructure and operate the Al Jalamid Phosphate deposit on behalf of Ma'aden.

SAUDI COMEDAT is committed to the national Saudization program that promotes the hiring and training of Saudi's in our business. As a result we have established an onsite training center to cater to the unique needs of the mining environment.

We believe that our presence here in the Kingdom should have a positive impact on the local communities, its residents and businesses.

We have a well-established local supply chain within the Kingdom and have an 80% spend rate of goods and services inside the Saudi Arabia.

The company is committed to excellence in our approach to projects and service delivery, focusing on the needs of our clients, while providing the highest standards of safety, social responsibility, environmental care, service, and quality.

PROJECTS

Al-Jalamid

The inaugural debut of large scale mining inside Saudi Arabia was introduced by Saudi Comedat Company Limited at the Ma'aden Phosphate Company's Al-Jalamid Phosphate project. This green field project encompasses, mining, processing and transportation of phosphate concentrate to the processing facility located at Raz AzZawr where it is refined into ammonia, sulfuric acid, phosphoric acid and diammonium phosphate. The mining area is 50 sq. km with a known reserve of 534 million metric tons of Rock Phosphate.

Given the scale and complexity of starting a green field project of this size, Saudi Comedat Company Ltd. was engaged by Ma'aden in 2007 on an 8 year contract to develop the mining infrastructure and undertake the mining services for the project. After the successful completion of the infrastructure mining commenced in 2009 on me as planned. In December 2017 a second contract started operation for a further 8 years.

Today Saudi Comedat has expanded its fleet capacity to meet the ever growing demands of the beneficiation plant at Al-Jalamid and as of now we have the capacity to deliver in excess of 36 million tons of overburden and phosphate per annum.

Al Khabra Test Mine

Another very large phosphate deposit Waad Al Shamal formally called Al Khabra is due north from Al Jalamid about 80 km. Maaden contracted Saudi Comedat to undertake the task of expanding an existing exploration pit to determine the geological properties of the ore body for beneficiation. The trial works were completed successfully in 2012. The project is in a highly sensitive border area between Saudi Arabia and Jordan.

As such Saudi Comedat was selected because of our local knowledge and outstanding reputation among the areas various governmental agencies within the region. As a result of the work done and samples provided by Saudi Comedat the Waad Al Shamal deposit was verified and is now going to be the Kingdom's largest mining project with an anticipated start date of 2016.
